Teacher's Gradebook and Report Card System (ClassIQ) Vision

Problem Statement: Teachers handle many students, assignments, exams and projects which makes grading a time-consuming and capable of making errors. Traditional methods like paper gradebooks and basic spreadsheet will not support weighted grading, automatic calculations and easy report generation. This will often result in delays in feedback and extra workload for teachers.

Target Audience: This product designed for teachers who need a reliable way to manage student grades in one place. It also supports students by allowing them to view their grades and performance clearly and securely. The system goal is for educational environments that prefer a simple desktop-based solution.

Value Proposition: ClassIQ bringing things to one place that helps teachers record grades, calculate results automatically and generate report cards effortlessly. By reducing manual calculations and organizing all grading data in one system, the application improves perfection, saves time and makes grading more transparent for both teachers and students.

Key Features and Functionality:

- Student and grade management
- Support for assignments, exams and projects
- Weighted grade calculations and automatic averages
- Individual student performance views
- Report Card generation
- Secure storage of academic data

Goals and Objectives:

- Deliver a fully functional gradebook system within the 8-week project timeline
- Reduce manual grading work for teachers
- Maintain grading precision and standardization
- Apply modern Java software development practices learned in the course

Vision Statement: Our vision is to a create a simple, reliable and efficient gradebook system that supports teachers in managing student performance. The goal is to make grading easier, faster and more correct while showing how a real-world educational application can be built using Java and modern software engineering practices.
