

USABILITY EVALUATION REPORT

Name: Roshini Fernando

Project: ClassIQ

No	Heuristic	Identified Issue	Evidence	Severity Level	Recommendation
1	H1-1: Simple & natural dialog	Login screen has excessive background elements reduce focus on the main login action. This can distract users from the main login action.		2	Reduce background intensity and keep the login area more focused and clear.
2	H1-2: Speak the users' language	The labels "I am a Teacher" and "I am a Student" are not very clear for login purpose. It is not obvious what users should do next.		2	Change labels to "Teacher Login" and "Student Login" and add small instructions for username and password.
3	H1-3: Minimize users' memory load	Users must remember information such as grading criteria or marks details when moving between different pages, as this information is not visible during related tasks.		2	Display relevant information (e.g., grading criteria or marks guidelines) on the same screen where users perform related actions.

4	H1-4: Consistency	The layout and formatting of the report card is different from other screens, which may confuse users when navigating the system.		2	Maintain a consistent layout and design style across all screens for a better user experience.
5	H1-5: Feedback	Confirmation message could be more visually noticeable.		1	Enhance confirmation messages by making them more visually noticeable (e.g., pop-ups or success icons).
6	H1-6: Consistency	Inconsistent button styles may lead users to make incorrect selections or misunderstand actions.		2	Use consistent button styles, colors, and sizes for all actions to make the interface uniform.

7	H1-7: Provide shortcuts	The My Info page only provides basic navigation through Back and Logout buttons. It does not provide any shortcut to move directly to other common pages like Report Card or Grading Criteria.		1	Add quick access buttons or shortcuts to frequently used pages
8	H1-8: Precise & constructive error messages	Error messages are not visually prominent and may be overlooked by users		1	Enhance the visibility of error messages by using clearer formatting such as color highlights, icons .
9	H1-9: Prevent errors	System shows “0” for unentered marks, which can confuse users into thinking marks are already given.		3	Display blank fields or “Not entered” instead of 0 to avoid misunderstanding.

10	H1-10: Help and documentation	The system provides a help section, but it is not easily accessible or visible from all pages when users need it.		1	Make the help option more visible and accessible (e.g., add a help icon or link on all main pages).
