

Usability Evaluation Report

Project: ClassIQ

Module: Software Testing

Assignment: Heuristic Evaluation

Group: 2

1. Introduction

This report presents a usability evaluation of the ClassIQ system based on Nielsen's 10 usability heuristics. The purpose of this evaluation is to identify usability issues and improve the overall user experience. The evaluation was conducted by reviewing key system interfaces such as the login page, dashboard, student management, and marks management modules.

2. Method

The system was tested by interacting with core features including login, navigation, student details, and mark entry. Each interface was evaluated against usability principles such as consistency, feedback, error prevention, and clarity. Issues identified by all group members were reviewed, combined, and refined to remove duplication. Each issue is presented with a severity level and suggested improvement.

3. Findings

No	Heuristic	Issue Description	Severity	Suggested Improvement
1	H1-1: Simple & Natural Dialogue	Login and home screens contain excessive background visuals, which distract users from main actions. 	2	Simplify background design and highlight primary actions such as login.

No	Heuristic	Issue Description	Severity	Suggested Improvement
2	H1-2: Speak the Users' Language	Some labels (e.g., "I am a Teacher") are unclear and do not guide users properly. 	2	Use clearer terms like "Teacher Login" and provide helper text.
3	H1-3: Minimize users' memory load	Teachers must remember grading criteria instead of seeing them during mark entry. 	3	Display grading rules near the mark entry interface.
4	H1-4: Consistency	Buttons, layouts, and styles are inconsistent across different pages. 	2	Apply a consistent design system for buttons, colors, and layouts.
5	H1-5: Feedback	System feedback and selection indicators are not clearly visible. 	2	Improve feedback using colors, icons, and highlights.
6	H1-6: Clearly marked exits	Back and Logout buttons are small or not clearly visible. 	2	Make navigation buttons more prominent and easy to access.

No	Heuristic	Issue Description	Severity	Suggested Improvement
7	H1-7: Shortcuts	The system lacks shortcuts such as search, keyboard navigation, or quick actions. 	1	Add search, filtering, and keyboard shortcuts for efficiency.
8	H1-8: Precise & constructive error messages	Error messages are not clearly visible or helpful. 	2	Improve error messages with better visibility and clearer wording.
9	H1-9: Prevent errors	The system displays “0” for unentered marks, causing confusion. 	3	Use blank fields or “Not Entered” instead of “0”.
10	H1-10: Help and documentation	Help and support options are not easily visible or accessible. 	1	Provide visible help options such as icons or menu links.

4. Conclusion

The ClassIQ system is functional but contains several usability issues affecting user experience. Major problems include inconsistent UI design, unclear navigation, poor feedback visibility, and misleading data representation such as showing “0” for unentered marks. Additionally, localization issues reduce system clarity. Addressing these issues will significantly improve usability, efficiency, and user satisfaction.
