

USABILITY EVALUATION REPORT

Name: Roshini Fernando

Project: ClassIQ

No	Heuristic	Identified Issue	Evidence	Severity Level	Recommendation
1	H1-1: Simple & natural dialog	Login screen has too much background design and decorations. This can distract users from the main login action.		2	Reduce background intensity and keep the login area more focused and clear.
2	H1-2: Speak the users' language	The labels "I am a Teacher" and "I am a Student" are not very clear for login purpose. It is not obvious what users should do next.		2	Change labels to "Teacher Login" and "Student Login" and add small instructions for username and password.
3	H1-3: Minimize users' memory load	The dashboard uses icons with labels, but users may not clearly understand the purpose of each option at first glance.		2	Add short descriptions or tooltips under each option to help users understand their function.

4	H1-4: Consistency	The layout and formatting of the report card is different from other screens, which may confuse users when navigating the system.	 The screenshot shows an 'Academic Report Card' for Student Number S1005, Class 10A. It lists marks for Mathematics (100), English (96), Science (88), Language (93), and Craft (63). The total is 440, the average is 88.00, and the feedback is 'passed all'. The layout is clean with a light blue background and icons.	2	Maintain a consistent layout and design style across all screens for a better user experience.
5	H1-5: Feedback	After entering feedback, there is no clear confirmation message to show that the action was successful.	 The screenshot shows the 'Student Details' page for Student Number S1007, Name Lucas Taylor, Email lucas@bbs.com. It includes a 'Marks' section with a table for Subjects (Mathematics, English, Science, Craft, Language) and Marks (all 0). There is a 'Feedback' text area and 'Save' and 'Cancel' buttons. The layout is clean with a light green background and icons.	3	Show a confirmation message such as “Feedback saved successfully” after clicking the Save button.
6	H1-6: Consistency	Buttons like “Clear” and “Open Profile” have different styles and visibility, which may confuse users.	 The screenshot shows the 'Students' page with a search bar and a table of all students. The table has columns for Student Number and Full Name. The buttons 'Clear' and 'Open Profile' are visible at the bottom. The layout is clean with a light green background and icons.	2	Use consistent button styles, colors, and sizes for all actions to make the interface uniform.

7	H1-7: Provide shortcuts	The system does not provide shortcuts for frequently used actions. Users must navigate manually using buttons.		1	Add keyboard shortcuts or quick navigation options for faster access to common features.
8	H1-8: Precise & constructive error messages	Reset password form does not show any validation or error message if incorrect or empty details are entered.		3	Add clear validation messages for required fields and incorrect input such as invalid email or password mismatch.
9	H1-9: Prevent errors	System shows "0" for unentered marks, which can confuse users into thinking marks are already given.		3	Display blank fields or "Not entered" instead of 0 to avoid misunderstanding.
10	H1-10: Help and documentation	The system does not provide any help option or guidance for users to understand how to use the features.		2	Add a help section, tooltips, or user guide to assist users in using the system.
