

Usability Evaluation Report

Module: Software Testing

Assignment: Heuristic Evaluation

Project: ClassIQ

Name: Poornima Jayamanna

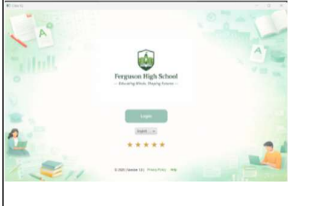

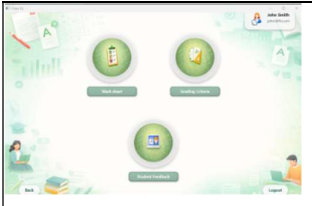

1. Introduction

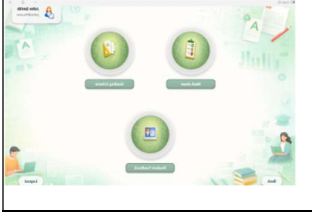

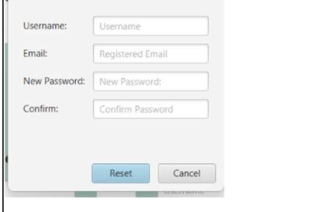

This report evaluates the usability of ClassIQ system using Nielsen heuristics. Some issues were found while testing different pages like login, marks, student details and report card.

2. Method

I tested different parts of the system and checked them using 10 heuristics. Then I identified issues and gave severity levels.

3. Findings

No	Heuristic	Issue	Screenshot	Severity	Improvement
1	H1-1	Login page has too much background design, little distracting		1	Reduce background or make it lighter
2	H1-2	Some labels not very clear for users		1	Use more simple words
3	H1-3	Student name is not clearly visible when selected		2	Highlight selected row properly

No	Heuristic	Issue	Screenshot	Severity	Improvement
4	H1-4	Buttons and styles slightly different in some pages		2	Keep consistent button styles
5	H1-5	The error message is not persistent		2	Improve the visibility of the error message.
6	H1-6	Back button is blinking and looks unstable		2	Fix UI bug for button
7	H1-7	No quick shortcut like search in some pages		2	Add search or filter option
8	H1-8	Reset password cannot work without real email		3	Add validation message or alternative method
9	H1-9	Showing '0' for unentered marks may mislead teachers into thinking marks are recorded.		3	Leave unentered marks blank instead of showing '0'.
10	H1-10	Teachers should memorize grading rules instead of viewing them while entering marks.		3	Show the grading scale next to the mark entry table.

4. Conclusion

The system works but has some usability issues. Main problems are feedback, font issues and UI bugs like blinking button. Fixing these will improve user experience.
